Summary

Data Scientist specializing in building and deploying high-impact ML solutions. Achieved 98% precision in real-time anomaly detection. Skilled in developing end-to-end solutions from concept to production. Proficient in Python, SQL, and cloud technologies, with a proven ability to translate complex data into measurable business outcomes.

Technical Skills

- **Programming:** Python, SQL, C++
- **Data Science & ML:** Machine Learning Concepts, Deep Learning, NLP
- **Libraries & Frameworks:** Pandas, NumPy, Scikit-learn, PyTorch, Matplotlib, Seaborn, OpenCV
- **Data Engineering:** ETL, Hadoop, Data Warehousing
- **Visualization & BI:** Tableau, Power BI, Excel, DAX, Streamlit
- **Cloud & DevOps:** AWS, GitHub, Linux
- **Web Tech:** HTML, CSS, JavaScript, React

Experience

Data Science & AI/ML Internship

1 Sep 2025 – 30 Nov 2025

Agamy Cyber Tech

- Engineered binary image classification model (92% accuracy) for face detection, cutting false positives 15% via custom 209.9k-image dataset.
- Built full-stack NLP pipeline for poetry sentiment analysis (95% accuracy) with real-time front-end interface.
- Directed phishing data analysis; Power BI dashboard identified 30% seasonal attack surge, enabling threat mitigation.
- Integrated a Chrome extension with machine learning models to identify phishing URLs, reducing the false positive rate to just 2%, minimizing disruptions for users and maximizing threat detection.

Projects

Ad Performance & Ethics Predictor (Full-Stack Data Science)

- Pioneered the use of 3 NLP lexicons to identify privacy-invasive and manipulative urgency language in digital ad copy, leveraging SHAP values to improve model interpretability.
- Deployed an interactive Streamlit app with FastAPI backend, achieving 88% model accuracy and reducing creative iteration time by 40%.

Real-Time Cryptocurrency Trade Anomaly Detection

- Built an end-to-end real-time data pipeline to detect anomalous cryptocurrency trades using live Binance WebSocket data.
- Implemented Isolation Forest (Scikit-learn) to score trade anomalies in real time based on price and quantity features.
- Deployed the pipeline on PythonAnywhere and integrated with Power BI REST API to deliver a live, self-updating anomaly dashboard.

Traffic Sign Recognition System (Deep Learning)

- Developed a CNN-based model to classify traffic signs for autonomous driving.
- Trained on the GTSRB dataset using TensorFlow/Keras with image preprocessing.
- Achieved 94% test accuracy across 43 traffic sign classes.

Certifications

- Practical Data Science with MATLAB Specialization — Coursera — Nov 2025
- Oracle Cloud Infrastructure 2024 Data Science Professional — Oracle — Oct 2025
- Big Data – 201 — Infosys Springboard — Apr 2024
- DAX Fundamentals — SQLBI — Mar 2024

Education

B.Tech in Computer Science, Specialization in Data Science

Garden City University, Bangalore

Expected 2026

CGPA: 9.14 (Till 6th Semester)
