

ALEEM

Data Scientist · Machine Learning Engineer · AI Engineer

Bangalore, India | +91 7411520636 | mrAleem2004@gmail.com | [linkedin.com/in/aleemDS](https://www.linkedin.com/in/aleemDS) | github.com/aleem1991

PROFESSIONAL SUMMARY

Data Scientist and Machine Learning Engineer (B.Tech, CGPA 9.14/10) with hands-on production experience building and shipping AI systems across cybersecurity, healthcare, and generative AI domains. Delivered measurable results: cut false positive rates by 15%, reduced manual review workflows by 40%, and deployed end-to-end RAG and LangGraph agentic pipelines serving real users. Comfortable across the full ML lifecycle — data engineering, model training, REST API deployment, and executive-level reporting.

TECHNICAL SKILLS

Languages	Python, SQL, C++
ML & AI	Scikit-learn, TensorFlow, PyTorch, Hugging Face Transformers, OpenAI API, CNNs, MLflow
Generative AI / LLMOps	LangChain, LangGraph, RAG Pipelines, Pinecone, Prompt Engineering, FastAPI
Data Engineering	Pandas, NumPy, PySpark, ETL/ELT Pipelines, RFM Analysis, Exploratory Data Analysis (EDA)
Cloud & DevOps	AWS, Docker, GitHub Actions, Linux, CI/CD
BI & Visualization	Power BI, DAX, Matplotlib, Seaborn, Plotly, Excel

WORK EXPERIENCE

AI/ML Engineer Intern | Anvaaya HealthTech, Bengaluru

Jan 2026 – Present

- Launched OmniAgent, a multi-platform bot supporting WhatsApp and Telegram simultaneously via webhook integrations — enabling cross-channel deployment from a single shared codebase.
- Architected stateful LangGraph agentic workflows with multi-turn memory and RAG pipeline grounding, improving response relevance for healthcare queries against internal documents.
- Introduced input safety guardrails to intercept out-of-scope queries on a consumer-facing healthcare product, meaningfully reducing LLM hallucination rates.
- Designed and containerized the PetWise chatbot backend using FastAPI and Pydantic; shipped full OpenAPI (Swagger UI) documentation with Docker deployment.

Data Science & AI/ML Intern | Agamya Cyber Tech, Bangalore

Sep 2025 – Nov 2025

- Implemented a phishing URL detection system using supervised ML with a real-time REST API inference layer, deployed against live production network traffic.
- Improved a computer vision face-detection model trained on 209K images to 92% accuracy by reducing false positives 15% through targeted data curation and hyperparameter tuning.
- Identified a 30% seasonal spike in phishing activity through EDA; translated findings into a Power BI executive dashboard for real-time threat monitoring.

PROJECTS

Ad Performance & Ethics Predictor | Python · XGBoost · FastAPI · Streamlit · SHAP · Docker

- Designed an XGBoost model to predict ad Impressions-per-Dollar; crafted a custom NLP lexicon to flag privacy-invasive ad language, achieving 88% classification accuracy.

- Shipped a Streamlit + FastAPI web app with OCR (Pytesseract) and SHAP explainability, cutting manual compliance review time by 40%.

Customer Segmentation & Churn Prediction | *Python · XGBoost · Scikit-learn · K-Means · Pandas*

- Processed 500K+ UCI Online Retail transactions into RFM features; applied K-Means clustering to define 3 behavioral customer segments for targeted retention campaigns.
- Engineered an XGBoost churn classifier achieving 73% recall; identified purchase frequency as the top churn predictor — users inactive 45+ days carry an 80% churn probability.

Generative AI for Synthetic Enzyme Design | *Python · Meta ESM-2 · Hugging Face · ColabFold · AutoDock Vina*

- Fine-tuned Meta ESM-2 on 64,496 PETase sequences; generated 1,000+ enzyme candidates and filtered to 50 novel variants with >95% sequence novelty vs. wild-type.
- Validated top candidates via ColabFold (pLDDT > 94) and AutoDock Vina docking; lead variant achieved −5.04 kcal/mol binding affinity compared to −6.2 kcal/mol for natural PETase.

EDUCATION & CERTIFICATIONS

Garden City University

B.Tech — Computer Science (Data Science Specialization)

CGPA: 9.14 / 10.0 | 2022 – May 2026
